No other cloud security vendor can match our experience and ability to execute. We understand that enterprise cloud deployments can be complex, and have successfully deployed solutions that span multiple regions, integrate with third-party tools, and have intricate interactions with enterprise infrastructure.

Proven Methodology— Reliable Results

CipherCloud delivers the experience, insight, and proven methodology to get it done right, and minimize your time to production. Integrated teams of solution architects, technical consultants, project managers and platform trainers work together to plan, design, deploy, and configure your solutions. No deployment is complete until it is fully validated and seamlessly integrated with your network infrastructure and cloud ecosystem. We ensure smooth go-live with detailed knowledge transfers to your team and CipherCloud Support to operate the live solution.

Best Practices to Deliver Compliance

CipherCloud doesn't just deploy technology. We leverage our extensive industry experience helping major enterprises protect sensitive data and ensure compliance. We apply our experience working with regulated businesses in banking, financial services, healthcare, telco, technology and government. Our experts work with your teams to identify what needs to be protected, recommend best practices, and choose the right protection schemes to meet your use cases.

CUSTOMER EXAMPLE

CipherCloud Implementation Services are used globally by customers in many industries including financial services, government, insurance, healthcare, and manufacturing.

A leading investment firm used these services to:

- Collaboratively design and plan implementation
- Provide custom integration with on-premises databases
- Integrate solution with third-party cloud utilities
- Ensure timely completion and go-live

CipherCloud, the leader in cloud security and visibility, enables companies to adopt the cloud while ensuring data protection, compliance and control. CipherCloud delivers a comprehensive multi-cloud security platform that integrates advanced FIPS 140-2 validated data protection, content control, monitoring, cloud discovery and risk analysis. The largest financial services, insurance, healthcare, telecommunication, and gaming companies across more than 25 countries have put their trust in CipherCloud.

CipherCloud, named as SC Magazine's Best Product of the Year, has received investments from premier venture capital firms Andreessen Horowitz, Transamerica Ventures, Delta Partners and T-Venture, the venture capital arm of Deutsche Telekom.

"Our cloud applications are highly customized and we needed a security solution designed for our environment. CipherCloud's expertise was critical to the project's successful on-time rollout."
